

RINOL *DRT*

**Smooth, Dust-Free and Durable
concrete surfaces**

FAST CONCRETE POLISHING FOR LARGE SURFACES

A complete system for applicators working on industrial, logistics and commercial concrete floors.

RINOLDRT is a complete concrete polishing system developed for treating large industrial and commercial floors with speed, consistency and control. Using a combination of diamond tools, densifiers and sealers, the system transforms new or existing concrete surfaces into harder, cleaner and easier-to-maintain floors.

The RINOLDRT system is mounted on ride-on power trowels, and allows applicators to achieve different finish levels according to project requirements, from functional matt surfaces to semi-gloss and high-gloss finishes. Each treatment sequence can be adapted to the condition of the concrete, the expected traffic, the required appearance and the maintenance programme.

RINOLDRT gives applicators a practical and reliable system for delivering durable polished concrete floors in demanding environments such as warehouses, logistics centres, production areas, retail spaces and public buildings.

Why choose RINOLDRT.

- » Fast treatment of large concrete surfaces
- » Compatible for new and existing concrete floors
- » Cost-effective surface treatment solution
- » Manufactured in the EU
- » Easy installation on all power trowels
- » Long-lasting diamond tools with even wear

RINOL Densifiers

RINOL**DensiPlus** is a product based on modified lithium silicates, which is used for surface hardening and post-treatment of concrete floors.

RINOL**DensiPot** is a product based on modified potassium silicates, used for surface hardening of porous and soft concrete floors.

RINOL**DensiSod** is a product based on modified sodium silicates, which is used for surface hardening and subsequent treatment of concrete floors.

RINOL Sealers

RINOL**Performance** is a water-based impregnating sealer which does not alter the appearance of the concrete floor. It provides protection against oil, grease and chemical stains.

RINOL**Performance Plus** is a semi impregnating water based solution for industrial and commercial floors which provides an extra layer of protection against oil, grease and chemical stains. It contains lithium and enhances the gloss of the concrete surface.

RINOLDRT POLISHING SYSTEM

A practical workflow for applicators using RINOLDRT on large concrete surfaces.

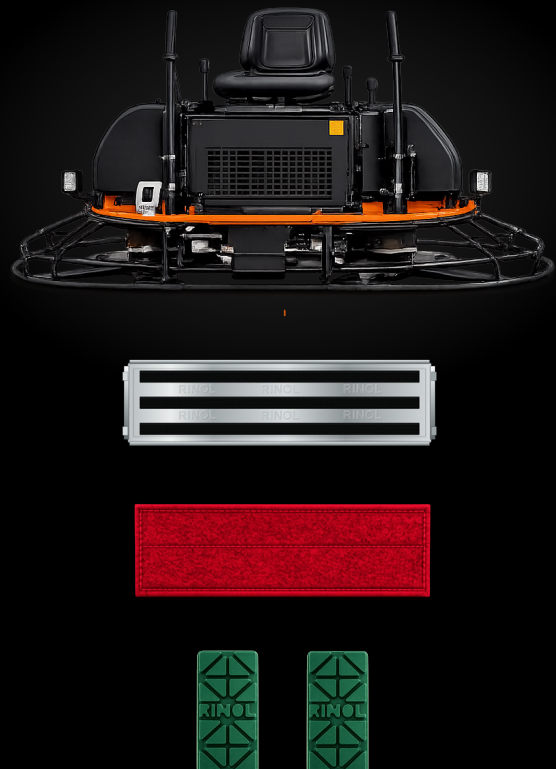

The RINOLDRT method is a wet polishing process that consists of 8 different types of Diamond Grits (#30-#3000). Depending on the concrete floor condition, further surface preparation may be required.

PATENTED MAGNETIC BLADE ATTACHMENT

The RINOLDRT Magnetic Blade Adapters allows the system to be mounted and installed to the power trowel with ease. The patented solution reduces set-up time and allows applicators to convert their power trowel machines into micropolishing machines in minutes.

Mount the system and start polishing.

MAINTAIN THE RESULT. EXTEND THE PERFORMANCE.

RINOL*Ultimate Pads* + RINOL*DensiClean*

A simple maintenance system for polished concrete floors.

A RINOL*DRT* treatment improves the concrete surface from the first application, but long-term performance depends on the correct maintenance programme. For this reason, RINOL provides a dedicated maintenance solution based on RINOL*Ultimate Pads* and RINOL*DensiClean*. Used with scrubber-dryer machines, the system helps keep treated concrete floors clean, uniform and easier to maintain over time. It supports routine cleaning while contributing to progressive surface refinement, helping preserve both appearance and performance in industrial, logistics and commercial environments.

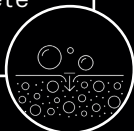

A complete maintenance approach

RINOL*Ultimate Pads* are diamond-impregnated pads designed for cleaning, micro-polishing and daily maintenance. Their mechanical action helps remove dirt and residues while supporting gloss recovery and visual uniformity.

RINOL*DensiClean* is a concentrated detergent for concrete floors. During cleaning, it helps remove dirt and oily residues while contributing to progressive micro-densification of the surface.

Clean

Removes dirt, residues and surface contamination from treated or worn concrete floors.

Densify

Supports progressive surface compaction and easier maintenance.

Micro-polish

Helps maintain gloss and visual uniformity and maintain a brighter appearance.

From final treatment to long-term care

After the initial RINOL*DRT* treatment, applicators can offer customers a simple maintenance programme that helps preserve the finish, reduce dust and extend the service life of the floor.
